19 October 1: 11

MEMORANDUM FOR: The Comptreller

SUBJECT:

Missiona of Mesponsibilities,

Office of Appareh and Developmen

1. Attached is an expanded statement of the roles and missions of the Office of Realisted Lovelopment. This is being forwarded per your propert to the Assistant Deputy Director (Research).

2. We look forward to an early resolution to the question of manpower authorizations and falled with the DDCI.

Tred Horbert Daces

HERBERT SCOVILLE, Jr.
Deputy Director
(Research)

MISSIONS AND REAL COURTEILITIES

of the

OFFICE OF RESFARCH AND DEVELOPMENT

25X1

published 30 July 1952, placed the responsibility on the Deputy Director (Research) to conduct in depth research and development in the scientific and technical fields to support intelligence collection by advanced technical means. This was to be exclusive of those research and development activities to support agent operations, NPIC, and the Office of Communications. In order to provide a capability to accomplish this mission, the Office of Research and Development has been formed in concept. While a preliminary Table of Organization and budget have been approved. the necessary manpower slots, funds, and physical space have not been authorized.

At present, the mission of the Office of Research and Development is conceived to be that of developing intelligence applications from technological discoveries, the operation of such applications and the conception of ways and methods by which operational analysis may maximize the effectiveness of such collection operations. In order to accomplish this, the ORD will have three major divisions, which are discussed below.

Research Division

The Research Division will be concerned with the broad scope of science and the capability of new advances or concepts to be utilized for intelligence purposes, without being restricted to specific collection problems. The Division will administer a program of external research projects to advance the state of the art in possible collection techniques. The products of this Division elay be applicable to the mission of other Agency components as well as major technical operations of the Deputy Director (Research). Falleding are a number of apacific examples:

in the field of the physical scheness in support of the En/R responsibility in SIGINT. We for emphasis here will be in the fields of electronical, self-rists physics, and chemistricating to major advences in the state of the art for electroquipment. c. Another main area of interest within the Research Division will be external contracts on basic research leading	b. A second area of interest within this division will in the field of the physical second area in support of the Fu/R responsibility in SIGINT. We are empires here will be in the fields of electronical, sofil state physics, and chemish leading to major advences in the state of the art for electroneous. c. Another main area of interest within the Research Edvision will be external contracts on basic research leading to innovations to new advanced included collection against	b. A second area of interest within this division will in the field of the physical sciences in support of the Enforcementality in SIGNT. Step or emphasis here will be in the fields of electronical sciences in support of the in the fields of electronical sciences in the state physics, and chemist leading to major advesces in the state of the art for electronical equipment. c. Another main area of interest within the Research Division will be external contracts on basic research lead to innovations to new advanced technical collection system.			
in the field of the physical scheeces in support of the Lu/R responsibility in SIGINT. .

Systems Division

The Systems Division will be responsible for translating premising new ideas not falling within the purview of CSA or CTL into technical collection systems including precurement, testing, finding and mausing of such systems against specific collection targets. This division will also conduct research and development on new ideas, concepts and techniques against specific collection requirements as opposed to the broad ageommitted research of the Mescarch Division. The objectives of this Division will be accomplished largely through a program of external research.

The Systems Division is conceived to consist of two major subdivisions. The first, tentatively titled Concepts Branch, is concerned with applying the present state of the art to collection problems to determine feasibility. Industry generates a large number of technical proposals for new collection systems. Nost of these must be taken with a grain of salt, and quite eften the best parts of several should be combined to make the optimum system. This would be a responsibility of the Concepts Branch. This branch is also responsible to be knowledgeable of the U. S. applied research in scientific areas in which new technical collection systems may be feasible. In this case, they would contract with selected companies, not having a vested interest, to technically evaluate these new ideas.

25X1 25X1 25X1

Analysis Livision

The Analysis Division, unlike it cause and Systems, will be proposed. The state will concern itself the following in-house activity. This mait will concern itself the following target systems and there are the concern to all the collection experts and the collection espect. By a judicious consideration of collection efforts again to given target systems it is placeful to obtain the maximum refers, for the minimum investments. Too effect collection is made on what is apparently easily result have the responsibility for breaking down large systems and analyting the weakness of these systems to collection. Various collection methods and concepts would be proposed. The actual collection efforts resulting from such inclysis would be corried as in the Systems Division, or in CSA, ONL, or the DD/P.

25X1

25X1

have been

requested for this Division, of which will be scientists. While this Division will have a certain amount of contract support, it is believed to remeary and so intended that they themselves do a solution of intelligence contraction systems are such that major contracting to industry is not really lessible for decirable. This is one area in which you must know what you are tables, about.

The distinction between the missions of Office of Special Activities. Office of Research and Development, and Office of ELIMT lies in the responsibility of ONE for innevations whereas and OEL are primarily concerned with the developmental, procurement, and application aspects.

An open ended mission such as that of ORD requires that a considered judgment be used in doctiding on the level of effort.

There is, however, a minimum effort both in funds and personnel before which little can be expected. The level of effort must be a propriet the over-all community effort and against the expectation of science. It is a presidered opinion of the Lapaty Lincolar (Research) that the expectations requested for the Living of Lapaters (Research) that the first local the minimum required for an insevative program in the law minimum required for an insevative program in the law minimum and total bridges. The there, this must be so.

wery important but accorded to be the Agency. It is necessary to explain to them the real situation. They must see what not all an especialisation they are joining, its grade ciructure, its roles and polysical location. It is apportunitiely necessary to start and a package from the real suppose of and it is very dangerous to let it grade from the physical organization decides to go into science in a major way, this is the approach taken. Hitness the large number of very adjoint new technical organizations optimizing up in inductory in this package fashion.
